HOW **BOUND PLANET** USED **ATLASTICITY + AWS** TO GAIN BETTER RELIABILITY

CHALLENGES

When we first started working with Grant from Bound Planet,he was running his enterprise workloads on local servers. With the many physical restraints of an on-premises datacenter, Bound Planet was finding themselves facing a recurring challenge of outages with any bad weather. The ongoing disruptions would leave them struggling with downtime of client-facing services, causing major issues such as lost potential revenue and reputation.

BOUND PLANET

Bound Planet believes that cybersecurity plays a critical role in business success. They help businesses understand risks, identify weaknesses, implement practices, and build comprehensive cybersecurity programs. Their hands-on experience, combined with training and professional certifications, enables them to deliver an outstanding client experience.

OUR SOLUTIONS

AWS Cloud

Hearing Bound Planet's challenges with business-critical workloads continuously being disrupted, taking precious time away from focusing on scaling his organization and serving his clients, we knew the AWS solutions that could benefit him.

By leveraging AWS cloud solutions and Atlasticity AWS managed services, we provided him with a more reliable and available technology platform to stay focused on what matters most - growing his business and serving his clients at the highest level.

"I was hosting my production workloads on premises. If my local server crashed or my internet went out, my client facing business services would be down. After working with the team at Atlasticity, I am now able to host my website in the cloud and provide better reliability and availability."

- Grant Burns
Owner, Bound Planet (CISSP, CMMC-AB Registered Practitioner)

ATLASTICITY

At Atlasticity, we partner with enterprise and IT leaders who are challenged by their digital transformation, to leverage (AWS) to transition from legacy processes, technology tools, and strategies to modernization, agility, and sustainability that can keep pace with IT and the competition.
